More benefit than you might think possible!

Introduction

Since 1988, AirWork & Heliseilerei GmbH (A&H) has been a leading name in the sector of ropes and rescue devices for helicopter operations. In the course of time, both the name and the associates of the company have changed repeatedly, as happened lately on the occasion of the fusion of Heliseilerei GmbH, Erstfeld, and AirWork Ragoni Services GmbH, Ebikon, which marked the beginning of AirWork & Heliseilerei GmbH (A&H) in Immensee. What has not changed, however, is our uncompromising commitment to innovation. This dedication plus the determination always to ensure quality and safety are the governing criteria of all our activities

Under the direction of Enrico Ragoni, AirWork & Heliseilerei GmbH mainly focuses upon its core business, i.e. the development, production and certification of load lifting accessories and rescue devices for helicopter transport, which are assembled under different product logos such as A&H Engineering, A&H Equipment, A&H Services and A&H Experts.

In order to protect our know-how we have decided to run all relevant production processes exclusively in Switzerland. Thus a multitude of small, even tiny sub-contractors build an efficient network for the development of innovative niche products. AirWork & Heliseilerei (A&H) itself acts as a supplier for helicopter companies working in the fields of load transport, logging, air/mountain rescue and off-shore operations, as well as for police and military forces, fire brigades and helicopter manufacturers

Buying A&H products means investing in reliability, functionality, conformity and safety – the basic prerequisites for working profitably and successfully.

We are your partner. In safety!

Some first impressions...
